

SELLING YOUR ENERGY

OPEN FOR BUSINESSES

TOTAL GAS & POWER

Why choose Total Gas & Power to sell your Energy?

We are...

Established and Secure

We're part of the TOTAL SA Group and have been focusing purely on UK businesses for over 25 years. If it's simplicity and price certainty you're after, then look no further.

A Trusted Energy Partner

We've been working closely with independent producers of all sizes since 2008. Whether you're just starting out, or already an established producer, we have the expertise and proven track record to help you choose the right Gas Purchase Agreement (GPA).

Reliable

Our dedicated & highly experienced team will be with you every step of the way. They provide UK-wide coverage and possess a firm understanding of the needs of renewable developers, investors and other parties.

Open & Transparent

We want our producers to get the most from their renewable gas, so if you're looking for a supplier that's open, transparent and easy to do business with, then look no further.

Flexible

Our modern range of GPAs have been tailored with independent producers in mind and designed to maximise potential revenue in a dynamic energy marketplace.

Innovative

Our market leading online GPA management platform allows you to closely analyse the energy markets, sell your energy, view your production results and quickly access your monthly statement.

Committed

Working with renewable energy reinforces our ongoing pledge to being committed to better energy. It's in our ethos.

The Total Experience

From the moment you've chosen and signed a GPA with us, you can look forward to enjoying a range of additional services that all form part of your energy solution. We call it **the Total Experience**.

Transportation Benefit

A Transportation Benefit representing the added value associated with being directly connected to the distribution system is also included in your GPA. We believe it's only right to pass this onto you.

Online GPA Management Platform

Included as part of your GPA, our market leading web based platform will give you direct access to energy prices, production data, your financial results and monthly statement.

Feed in Tariff (FiT) Service

If embedded power generation also exists at the gas to grid facility, FiT-eligible producers will have access to this comprehensive service which features:

- A dedicated FiT team to provide scheme advice and support
- A Scheme application and registration service
- Timely payments on production and, where applicable, export tariffs
- FiT production and export metering services

Furthermore, all producers who maintain their GPA with us will benefit from our premium FiT payment service, which provides a more regular FiT income compared to the industry standard quarterly payment cycle.

Certificate Purchasing

We're all about the flexibility and freedom, so if you sign onto a GPA, there's no obligation to sell your Bio Methane Certificates through us. However, we are more than happy to help arrange a route to market for your Bio Methane Certificates, via introduction to interested gas consumers within our UK-wide portfolio.

TRIAD Warning Service

If embedded power generation also exists at the gas to grid facility, we'll let you know when there's a possible triad event - so you can truly maximise your production strategy.

OUR PRODUCTS

Gas Purchase Agreements (GPA)

OPEN FOR BUSINESSES

TOTAL GAS & POWER

No matter what your plan is for selling energy, we have the right GPA for you. All our GPAs have been designed to meet lender and bank requirements, whether you have a standalone production asset or are investing in a portfolio of gas to grid projects.

So, if you want a simple, hassle free solution for your gas sales with no responsibility for imbalance risk, then look no further at our FIX or FIX+ GPA. Alternatively, our FLEX GPA allows you to take a more dynamic approach to your gas sales, providing you with full and direct access to the UK gas market whilst taking a little more time in making any commercial decisions. Total Gas & Power are committed to supporting the UK Biogas marketplace.

Product 1 FIX

Agree a fixed energy price for all production at the start of your GPA, then sit back and relax and enjoy a guaranteed, consistent income for your renewable gas production.

Plus, here at Total Gas & Power we offer our fixed and competitive prices for up to five years ahead.

Ideal for producers who...

Enjoy the peace of mind from constant revenue certainty, regardless of what happens in the energy markets

Product 2 FIX+

Our Fix+ GPA provides you with the freedom to create your fixed price at various times of your choosing. At the heart of this GPA is price security, whilst still providing producers with the ability to take advantage of energy market movements. All transactions are simply managed through our online energy management platform.

Ideal for producers who...

Do not wish to fix their energy price at any one point in time and spend a little time monitoring energy prices and markets

Require the safety net of being able to agree a fixed price for all their gas but through one or more transactional decisions

Product 3 FLEX

If you have the appetite to maximise your revenues then look no further – our fully flexible GPA is the one for you. Through our online GPA management platform, producers can make full use of the forward energy marketplace, as well as hourly day ahead prices, in order to optimise and effectively manage their production assets. Plus, individual site outputs are consolidated to give portfolio benefits.

Ideal for producers who...

Need to meet the needs of both commercial and production requirements

Require the flexibility to optimise energy prices and the ability to react instantly to wholesale energy market movements

Wish for flexibility to add more sites and associated volumes across all technologies
