

TotalEnergies

Baseload for Electricity

Managed flexibility

For the engaged energy manager who wants a level of security.

How it works

Lock down the price of the bulk of your forecast energy consumption ahead of each month.

The remainder of your consumption will be priced at an index rate up to an agreed limit.

Benefits

Allows you to purchase energy ahead of when you want it.

Lets you trade flexibly while giving some protection from market fluctuations.

“ ”

I want to manage how my company buys energy but I don't have the time to be watching the markets 24-7

Key Features at a glance

Set your price at a monthly level by trading for the bulk of your consumption ahead of time.

Make purchases in months, quarters or seasons based on an agreed consumption profile.

We will hedge any remaining volume up to a pre-agreed level on an index price if you have not traded your full requirement before delivery.

Protection from within day price volatility on your final price.

Non-commodity charging options

Non-commodity costs (Non CoE) are the obligatory charges in your price that are not for the electricity itself. This includes elements such as transportation and metering.

Choose from:

- Straight pass-through of charges as they are received from third parties
- Fix your charges each year as your term progresses

Commodity Costs

The Standard Baseload product centres around the concept of Agreed Baseload Volume (ABV). This is the agreed maximum amount that you can purchase in forward trades. If there is a difference between forward-traded level and the ABV level, this is then settled on an index price ahead of the month of delivery (balancing trade).

Cost of Electricity

(Average)

The Cost of Electricity is then applied to the whole of your actual consumption, and you are protected from volatile within-month market fluctuations, as long as your consumption stays within a set band.

Why TotalEnergies Gas & Power?

In addition to being one of the UK's largest energy suppliers, we offer a range of valuable services, including:

Renewable Energy

Choose a more sustainable supply to ensure your energy comes from 100% renewable UK sources.

Position Reports

Detailing your locked in energy volume versus what you still have to purchase for your profile.

Market Reports

Daily and within day commentary and info on market conditions.

EV Charging

Future-proof your EV charging requirements with our world-leading networked technology.
